

THE NORDIC CAPACITY CALCULATION METHODOLOGY PROJECT

Newsletter issue 2017/3

UPCOMING EVENTS:

Stakeholder Group (members have been nominated)

- October 11 2017,
Clarion hotel,
Copenhagen airport

Stakeholder Forum (all are welcome!)

- December 11 2017
Clarion hotel,
Copenhagen airport

The Nordic TSOs have submitted their common Nordic Capacity Calculation Methodology (CCM) for the Nordic Capacity Calculation Region to the NRAs on September 15, 2017. The main driver for the Nordic TSOs to develop a common methodology is the Commission Regulation (EU) 2015/1222 of 24 July 2015 establishing a guideline on capacity allocation and congestion management (CACM). The proposal is the following.

For the **Day Ahead** timeframe: The Nordic TSOs propose to implement a flow-based capacity calculation approach for the Day Ahead Market timeframe

For the **Intraday** timeframe: As the long-term solution, the Nordic TSOs propose to implement a flow-based approach for the intraday timeframe, as soon as the intraday market platform is technically able to utilize flow-based capacities. As an interim solution, the Nordic TSOs propose to implement a coordinated net transmission capacity approach for the intraday market timeframe.

The Nordic TSOs would like to thank all the stakeholders for their efforts, and the valuable comments provided during the two consultation rounds (the first on the explanatory document, the second on the legal document). The responses that the Nordic TSOs received in those two consultation rounds are embedded in annexes of the explanatory document. In these annexes, it is indicated whether the Nordic TSOs have taken the comment into account either in the explanatory or the legal document and,

- If the comment is not taken into account in the explanatory or legal document, a reasoning why
- When the comment is taken into account in the explanatory or legal document, an explanation how the comment is reflected and where

Where can you find the final CCM proposal?

The Nordic Capacity Calculation Methodology (CCM), as submitted to the NRAs on September 15, can be found on the Nordic Stakeholder Information Platform. The stakeholder information platform is hosted by the Nordic RSC, and can be found at the following link: <http://nordic-rsc.net/ccm/>

Transparency

One of the key concerns expressed by the stakeholders, is the transparency linked to the FB capacity calculation methodology. The Nordic TSOs subscribe that transparency on the capacity calculation is key for the market participants to understand and anticipate the price formation.

The Nordic TSOs would like to take up the dialogue with the stakeholders on this topic. Indeed, this will be one of the main agenda items for the October 11 Stakeholder Group meeting, where the industry organizations, national regulatory authorities, and power exchanges have nominated representatives that meet and discuss issues together with representatives from the project. In this meeting, the Nordic TSOs would like to give the floor to the stakeholders to explain what are their needs (in terms of transparency in a FB future), why it is needed, and how the implementation of FB changes these needs (or not).

As a starting point for this dialogue, the Nordic TSOs shared an example of a stakeholder information tool, and the FB capacity calculation and allocation results, as presented in the explanatory document, on the stakeholder information platform, hosted by the Nordic RSC: <http://nordic-rsc.net/simulation-results/>

We would be happy to receive your feedback on those elements!

Questions or remarks?

In case of questions or remarks, we invite you to send an email to: CCM@nordic-rsc.net.

Of course you can approach one of the TSO representatives, mentioned in the banner of this newsletter, as well.
