Status update on the internal parallel run

- Parallel run setup is depicted in the image below
- The focus is now on the power system and market impact analysis (red square)

Power system and market impact analysis

- During the initial market impact analysis of week 35 and 36, the Nordic TSOs noted some discrepancies related to the expected outcome.
- Observed discrepancies originate from missing essential data from the input datasets, bugs in the post-processing scripts, incorrect/inconsistent topology file of the simulation facility.
- The Nordic TSOs, together with involved parties, are solving these discrepancies.
- As soon as the issues are resolved, the Nordic TSOs will produce and share the corresponding market reports with the stakeholders.
